The program's normative framework takes
precedence over this leaflet.
Organization authorized to offer the Éconologis service:

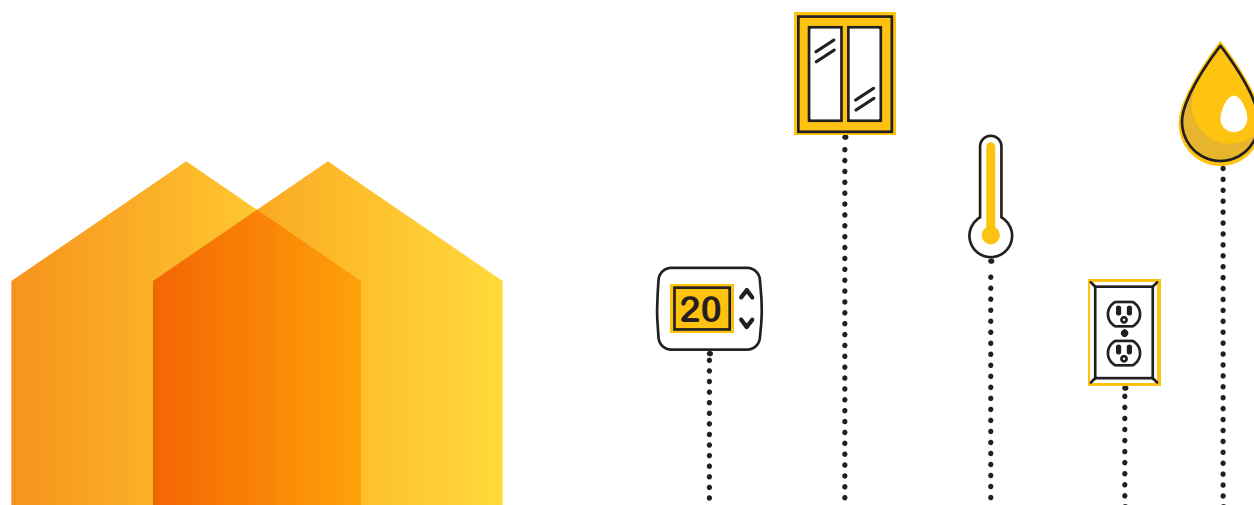

In energy efficiency, every little thing counts!

Québec's energy transition is everyone's
business. You don't need to invest a lot of time
and money, nor undertake major renovation
work, to make quick gains in efficiency. The
combined effect of all our actions, as small
as they might be, generates impressive results
on a community scale.

Éconologis

The Éconologis program provides free help for modest income households to improve energy efficiency and comfort levels in their homes, whether they are tenants or owners.

Five reasons to participate

- › Home consultation with an advisor who could help you manage your energy consumption
- › Light work that we could do for you (caulking and installation of energy-efficient products)
- › Improved home comfort
- › Fewer draughts
- › Verification of your preliminary eligibility to receive a free heat pump and smart thermostats from Hydro-Québec

Period

The program is offered from October to March.

Eligibility criteria

- › Meet the income threshold

Visit from an energy efficiency advisor

Receive a visit by an advisor and obtain practical advice about:

- › Heating
- › Hot water
- › Household appliances
- › Lighting

Take advantage of some of the following measures based on the needs identified by an advisor:

- › Caulking and weatherstripping windows
- › Installing weatherstripping on doors
- › Insulating electrical outlets on outside walls
- › Installing low-flow showerheads
- › Installing aerators on water taps

Eligibility for a free heat pump

Receive a visit from an Éconologis advisor who will check whether you are eligible to receive a heat pump at no cost under Hydro-Québec's LogisVert Program. If you are eligible, Hydro-Québec will cover the full installation of the heat pump, without you having to pay a cent. This equipment heats the home in winter and cools it in summer.

If you are eligible, Hydro-Québec will cover the complete installation of the heat pump by a certified professional. This equipment will improve your comfort in both winter and summer.

Please note that the program is evolving: additional equipment may be offered to you at a later date, including smart thermostats.
